

## SEG V

# Extensions and Amendments in Software Version 75

## Things To Know – An Overview

### Innovations

---

- | **Extension of the antiglare high beam assist function:** Integration and actualization of the function for the models Ford Mustang Mach E Facelift, Skoda Kodiaq, Skoda Octavia IV, Skoda Superb IV, VW Passat, VW T-Cross, VW Tiguan and VW Touareg
- | **Optimization of the selection of the AFS algorithm (antiglare high beam):** The user can select the suitable algorithm by comparing the light distribution patterns. Here the device indicates graphic elements of the stored AFS light distribution patterns and it compares them with the real light distribution patterns of the headlights in the measurement menu. In addition the device provides explanations for the prevailing light distribution patterns.
- | **Implementation of a "failsafe" function:** This function still ensures the creation of a diagnostic file in the event of fatal errors.

### Revisions

---

- | **Actualization of the vehicle database:** The database has been extended by 436 new vehicles.
- | **Optimization of startup process:** The startup process of the software has been improved.

## SEG V

## Functions According to Manufacturer

This list merely gives a basic overview of the scope of our data extensions. A complete list with all the model additions for every manufacturer would be simply too extensive.

### Extended and Revised Manufacturers

---

The following list comprises the vehicles which require a special procedure for calibration / alignment of the light distribution, such as the antiglare high beam.

#### Audi
